

In the claims:

All of the claims standing for examination are presented below with appropriate status indication.

1-28. (Canceled)

29. (Currently amended) A method for assigning tasks to agents in a service center based on an agent skill set required to service individual tasks, the method performed by software executing from a computerized server, comprising steps of;

[(a)] receiving a task at a server operating within the service center;

[[[(a)]] in response to a task being prepared (b) preparing the task for service by
[[,]] determining the agent skill set that would be best suited for responding to the task,

[(b)] (c) building a skill table of all available agents having skills at least
partially matching the determination of skills needed to service the task in step [[(a)]] (b),
wherein the skill table is organized by skill sets that include all skills possessed by the
agents;

[[[(c)]] (d) determining from the skill table of available agents all agents qualified
to service the task;

[[[(d)]] (e) selecting an agent least qualified to service the task from the agents
determined to be qualified to service the task and assigning the task to the selected agent;
and

[[[(e)]] (f) servicing the task by the selected agent utilizing at least a portion of the
skills listed in the skill table.

30. (Canceled)

31. (Currently amended) A computerized server including software executing from a
computer readable medium Apparatus for assigning tasks to agents in a service center
based on an agent skill set required to service individual tasks, comprising;

means for determining the skill set that would be best suited for responding to the task in response to the task being prepared for service;

means for building a skill table of all available agents having skills at least partially matching the skill set determined to be best suited to service the task,

wherein the skill table is organized by skill sets that include all skills possessed by the agents;

means for determining from the skill table of available agents all agents qualified to service the task;

means for selecting an agent least qualified to service the task from the agents determined to be qualified to service the task .

32. (Canceled)

33. (Currently amended) Computer program code embodied in a tangible computer readable ~~media~~ medium embodied with computer executable instructions for controlling a computer to assign tasks to agents in a service center based on agent skills required to service individual tasks, the program code comprising;

a first code for determining the skill set that would be best suited for responding to the task in response to a task being prepared for service;

a second code for building a skill table of all available agents having skills at least partially matching the skill set determined to be best suited to respond to the task, wherein the skill table is organized by skill sets that include all skills possessed by the agent;

a third code for determining from the skill table of available agents all agents qualified to service the task; and

a fourth code for selecting an agent least qualified to service the task from the agents determined to be qualified to service the task and assigning the ask to the selected agent.

34-36. (Canceled)
